Brahman Systems are used for temporary protection of hoses and cables on road crossings. They improve the safety and eliminate the cost of burying hoses and cables, stringing them overhead, or building a ramp from nailed-together scaffold boards. No longer do you have to worry about disturbing the environment through trenching or having scaffold boards splinter. Brahman Systems delivers the only all-steel, enclosed hose and cable protection, capable of 65 tons of load without crushing. These patented systems offer numerous safety and operational benefits like super-strong, all steel, non-skid construction; full opening, top-loading pocket for ease of cable, hose and line placement; and simple and quick installation. The unique modular design and available accessories make it possible to configure a Brahman System to match any on-site requirement.
